This page is intentionally left blank.

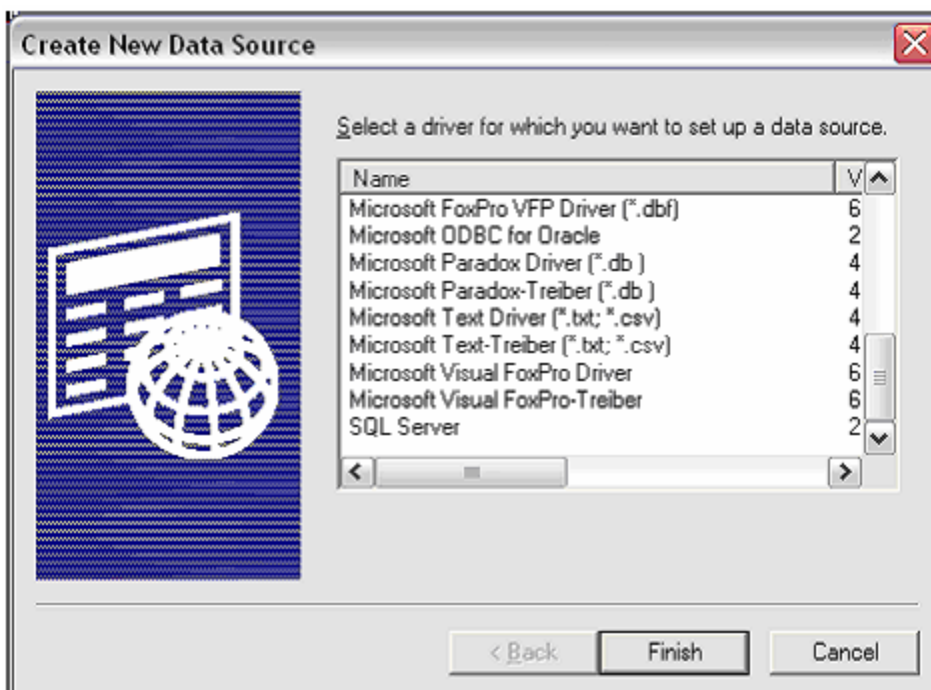

Configuring the DocuShare ODBC Data Source

Setting up your DocuShare SQL Data Source Name Interface

Select Start / Programs / Administrative Tools. From within Administrative Tools, open Data Sources (ODBC) and select the System DSN tab. You should see a panel similar to the following.

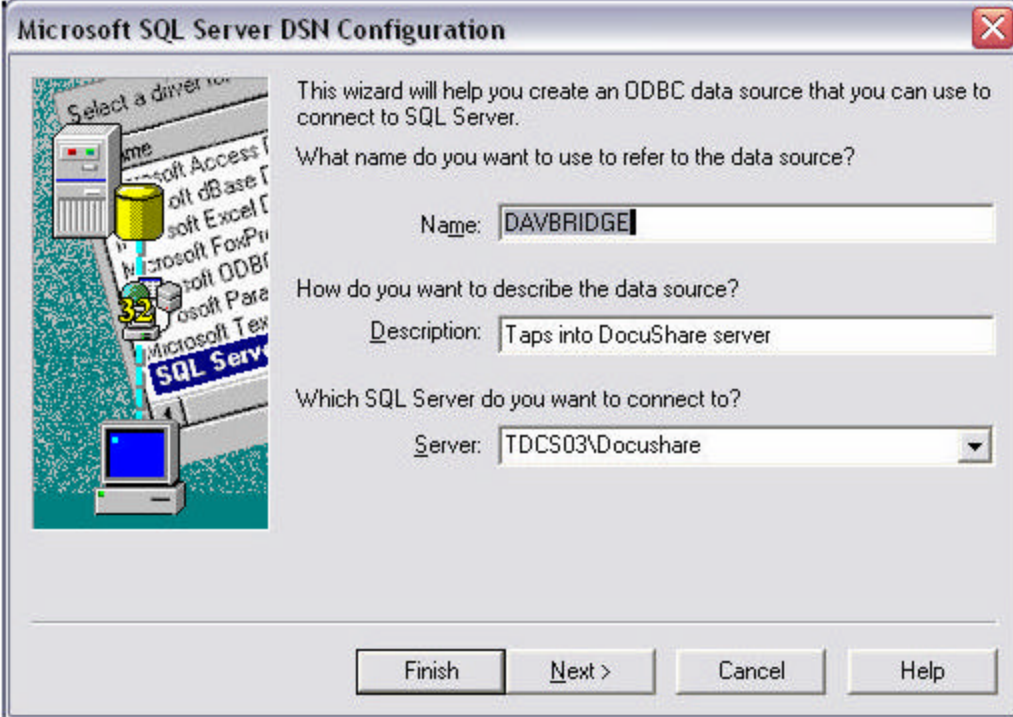

Click Add and select the SQL Server driver from the list and press Finish.

Configuring the DocuShare ODBC Data Source

Enter the name for the DSN (e.g. DAVBRIDGE) and enter a brief description for future reference along with the machine name for the server (e.g. XDS01) followed by a backslash and "Docushare", as shown. The database name, Docushare, is case sensitive.

Microsoft SQL Server DSN Configuration

This wizard will help you create an ODBC data source that you can use to connect to SQL Server.

What name do you want to use to refer to the data source?

Name:

How do you want to describe the data source?

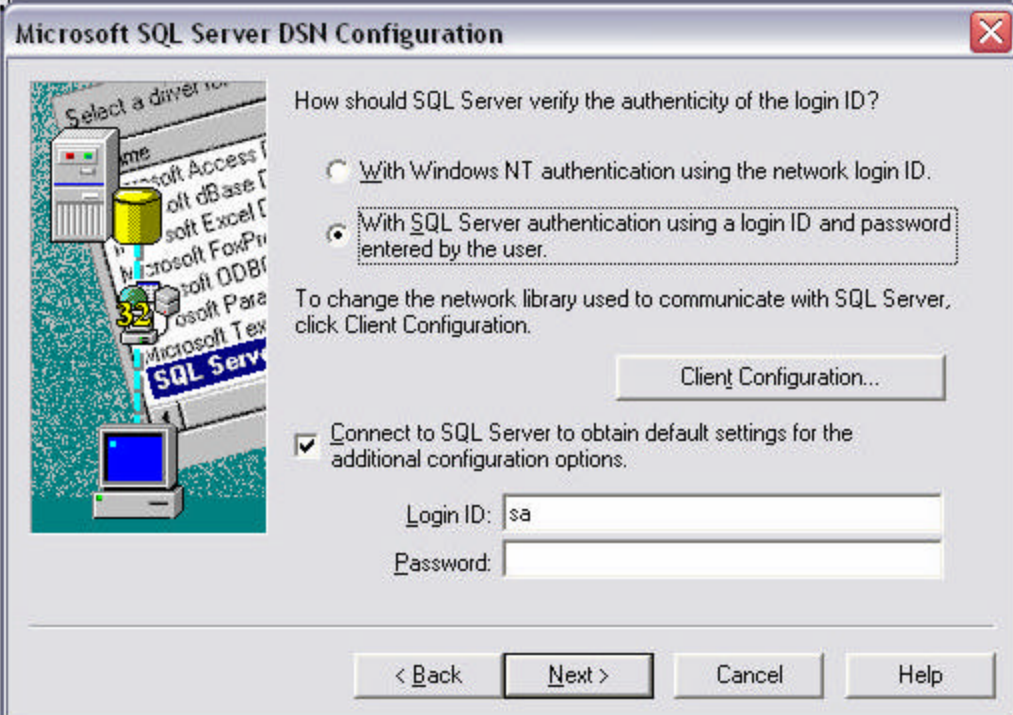

Description:

Which SQL Server do you want to connect to?

Server:

Finish Next > Cancel Help

Press Next and configure this panel as follows with your user name and password to access the Docushare database.

Microsoft SQL Server DSN Configuration

How should SQL Server verify the authenticity of the login ID?

☐ With Windows NT authentication using the network login ID.

☒ With SQL Server authentication using a login ID and password entered by the user.

To change the network library used to communicate with SQL Server, click Client Configuration.

Client Configuration...

☒ Connect to SQL Server to obtain default settings for the additional configuration options.

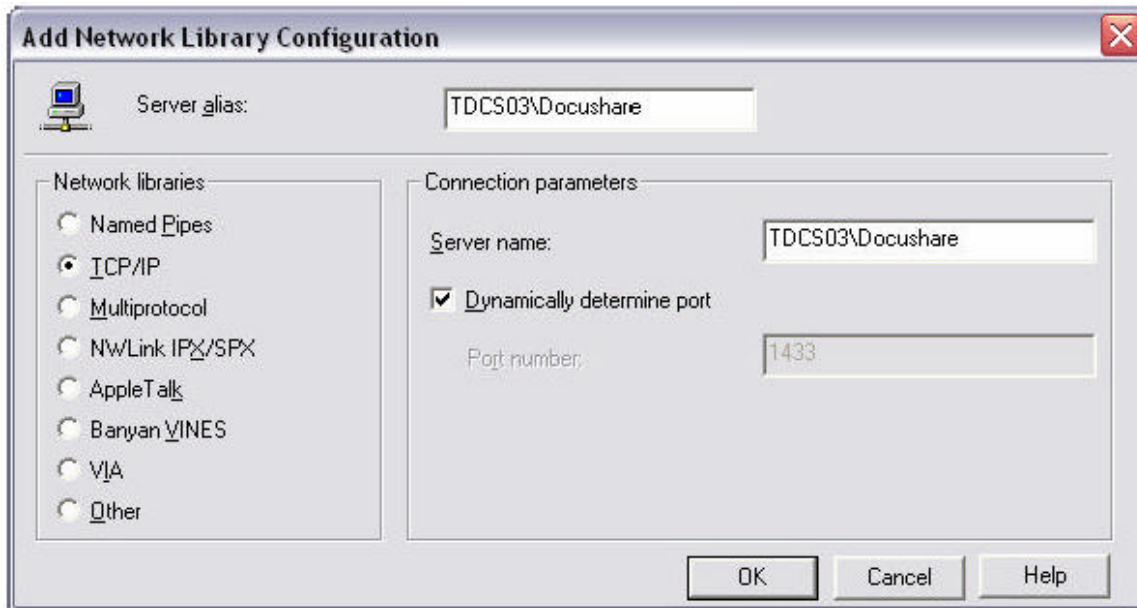

Login ID:

Password:

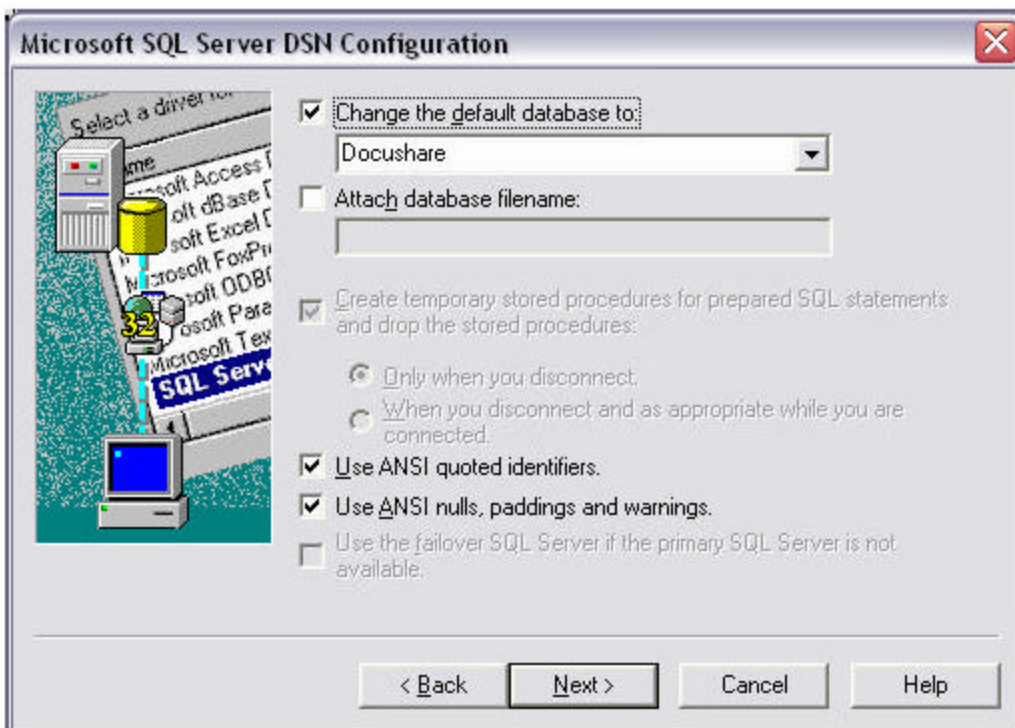

< Back Next > Cancel Help

Configuring the DocuShare ODBC Data Source

Check your Client configuration to read as TCP/IP with your machine name substituted, then click OK.

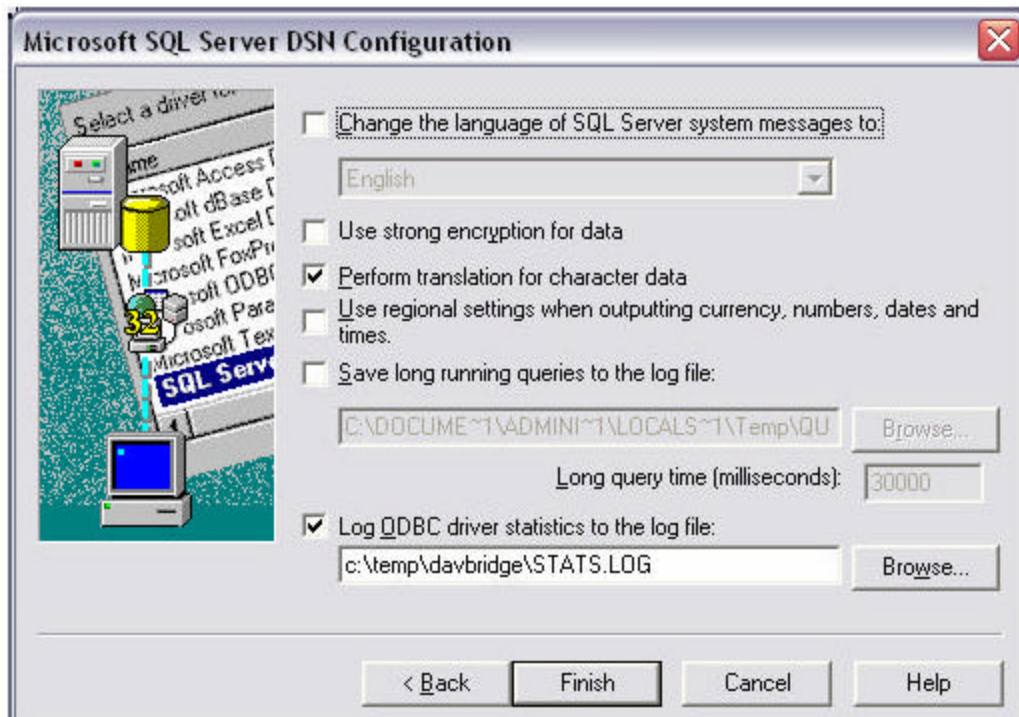

This returns you to the DSN Configuration panel. Click Next. Make sure this next panel is configured as follows, then click Next.

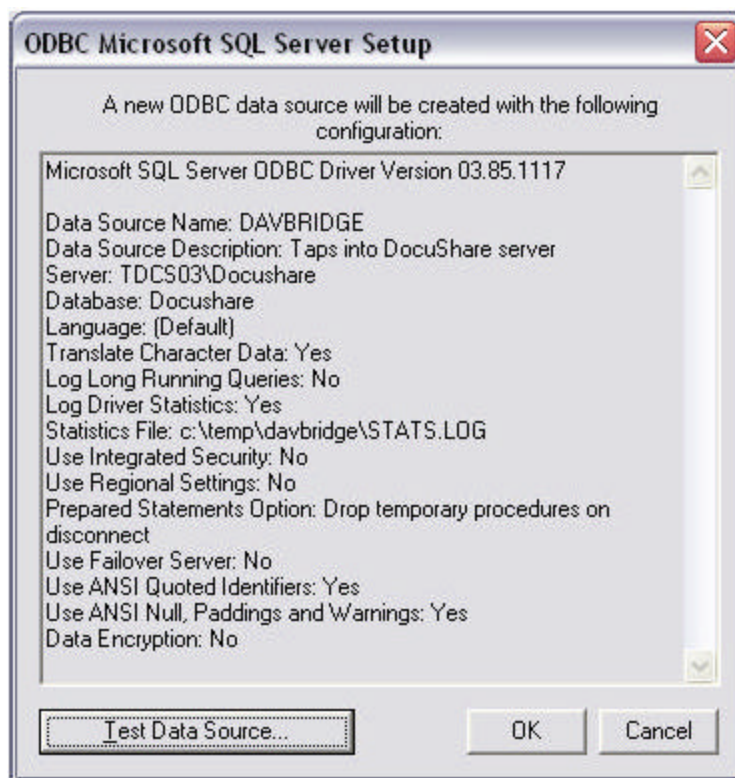

Set up this next panel as such and create a log file in case there's a need to check for errors later. I'd recommend this go to your local c:\wip\reports directory.

Configuring the DocuShare ODBC Data Source

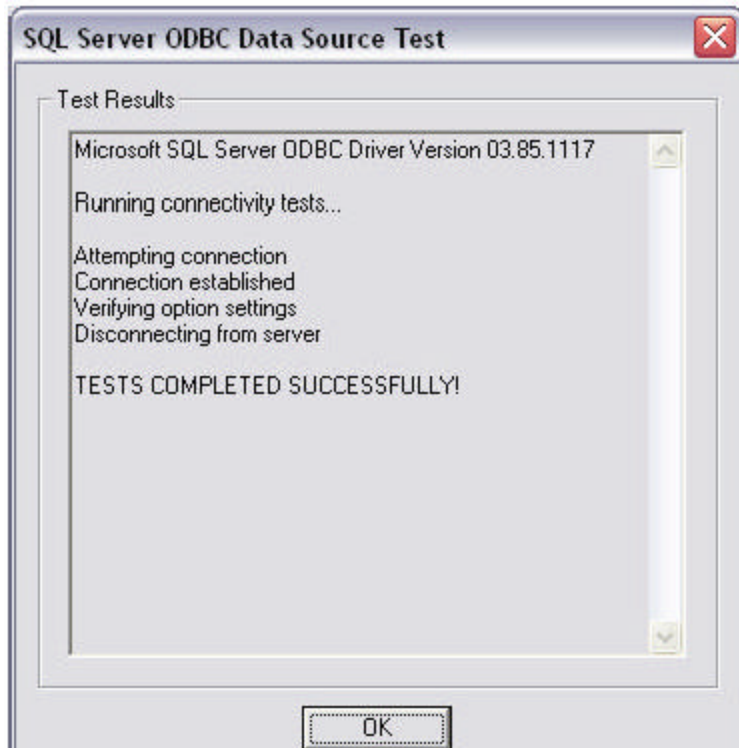

Clicking Finish will test the connection. Select Test Data Source.

Once it passes, you'll see something similar to the following test results.

Configuring the DocuShare ODBC Data Source

Select OK three times to accept your new driver and exit the setup routine.
